

<b>DEF-001</b>	<b>Sale Price Higher Than Regular Price Is Saved</b>
Module / Page	Admin Panel - Product List
Priority / Severity	Critical
Preconditions	There are products in the Admin Panel. Each product has a Regular Price and a Sale Price field.
Steps to Reproduce	<ol style="list-style-type: none"> <li>1. Go to Admin Panel → Product List.</li> <li>2. In the Sale Price field, enter a number higher than the Regular Price.</li> <li>3. Click Save.</li> </ol>
Expected Result	System should show a validation message: “Sale price cannot be higher than regular price”.
Actual Result	System saves the value even if the Sale Price is higher.
Business Risk / Impact	<p>Wrong prices and discounts.</p> <p>Users lose trust.</p> <p>Financial problems for the shop.</p>
Environment	Stage environment. Example: Windows 10, Chrome.
Evidence	 <p>The screenshot shows a web application interface for managing products. A table lists products with columns for 'Id', 'Name', 'Price', and 'Old price'. The first row shows a product with Id 136, Name 'Назва', Price '500', and Old price '150'. A red box highlights the 'Price' and 'Old price' columns. A blue notification banner at the top right says 'Data updated successfully'. A green checkmark icon and the text 'Дані успішно оновлені' (Data successfully updated) are also visible, along with an 'OK' button.</p>
Fix / Retest Ideas	Check values: -0.01, 0, 0.01, big numbers.
